

DESIGN STANDARD AND AD-HOC REPORTS USING MULTIPLE DATA SOURCES WITH REPORT ENGINE™

All organizations have the need to create multiple reports, in many formats, and utilizing many data sources. Report Engine provides an easy-to-use interface for building reports using data from across your organization including maps, charts, and other embedded multimedia.

Meeting the reporting needs of your entire organization

Many geospatial reporting tools are restricted to using data sources that are managed by the GIS, but most organizations need to access and share both GIS and non-GIS data. Report Engine can utilize data from any database table or view and provides full-functioning reporting capabilities. From simple tabular reports to complex analytics combining multiple data sources, calculations, and graphs, Report Engine puts your data where it is needed most, in the hands of decision makers.

Better Communication

Business units can output their data into formal reports to send to other stakeholders electronically or print as hard copies.

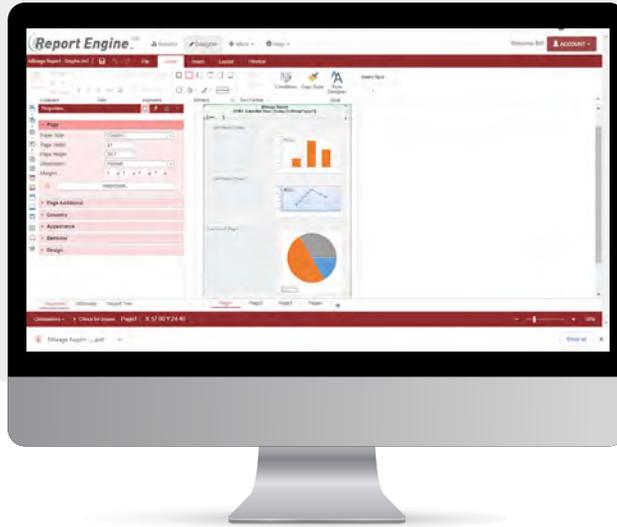

Interactive Report Wizard

Novice users can take advantage of the Report Wizard to guide them through report creation, while advanced users can design reports starting from a blank canvas.

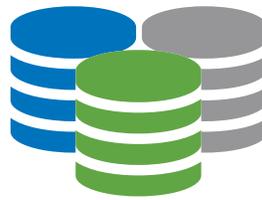

Reports Dashboard

View and edit report designs to meet individual needs. Store, access and share reports using the Report Dashboard.

Key Features & Benefits

Create visually attractive reports with maps, graphs, and charts

Utilize multiple database tables and views in your reports

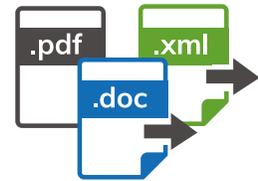

Apply filters to dynamically drill into output results

Embed Report Engine into our other web applications to configure reports and outputs

Easily manage and organize your reports using the Report Engine Dashboard

Output reports to a variety of file types including PDF, DOC, XLS and many more
